

Nat pool tanımı

Yük dengeleyiciler, varsayılan ağ geçidi -default gateway- olmadıklarında, erişmeye çalıştıkları sunucuların, trafiği kendilerine geri gönderebilmeleri için, erişim talebi yaparken, kaynak adreslerini değiştirirler.

Nat Pool oluştururken ADC->>>Ip Source Nat kısmına gidiyoruz.

Create kısmından yeni NAT poolumuzu oluşturabiliriz.

Ardından bu yaptığımız NAT pool tanımını ADC-SLB-Virtual Services altında ilgili Virtual Service' e bağlamamız gerekiyor.

Yukarıdaki değişikliğin show çıktısı aşağıdaki gibidir.

```
ip nat pool Local-Pool 192.168.10.50 192.168.10.55 netmask /24
slb virtual-server VIP 5.5.5.5
  port 80 http
  name VIP_80_http
  source-nat pool Local-Pool
  service-group SERVICES
  template persist source-ip Sticky-Local
  template http X-forwarded
!
```
