Backup System Configuration

copy config

With this option you can only take a configuration backup, a complete backup includes ;

- SSL certificates
- User passwords
- PKI Infra passwords
- Logs

This type of backup is not a complete backup but it is better than nothing.

To take a quick configuration backup and according the length of your configuraiton, you can;

- copy/paste
- record serial terminal or ssh session output

backup using gui

backup to ftp server

automated backup jobs
